

6 Ways to Prevent Mold

1. Clean and dry up spills within 24 hours.
2. Keep indoor humidity to less than 60 percent at all times through adequate ventilation, and the use of air conditioning and dehumidifiers.
3. Avoid humidifiers, hanging wet clothes, to dry indoors, and taking a shower or bath without first turning on the bathroom exhaust fan.
4. Get your AC unit flushed every 6 months.
5. Install HEPA filters inside air supply duct registers; and use a vacuum cleaner with HEPA filter.
6. Inspect bathroom, kitchen, and laundry room plumbing areas (such as inside and beneath sinks and sink cabinets) regularly for water leaks, water damage, and mold growth.
